# Introduction

## LX Hausys BENIF Architectural Interior Films

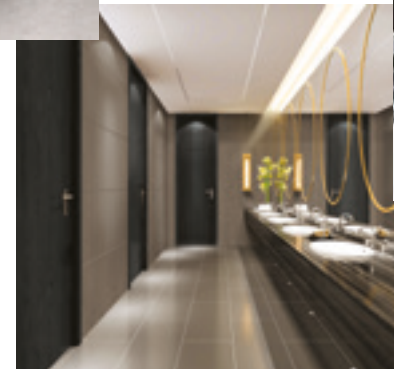

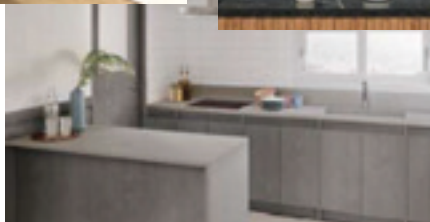

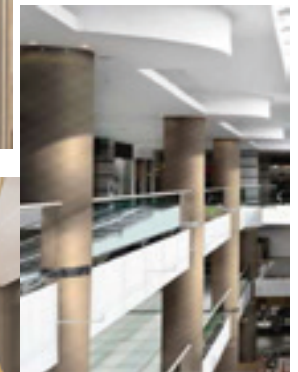

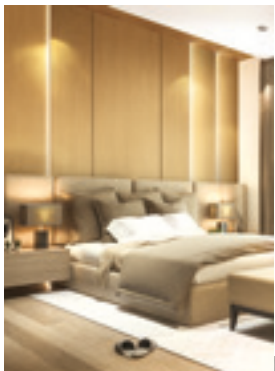

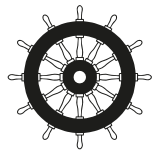

This UK Hot 100+ range covers the most popular textures, colours and finishes for delivery next day.

The complete LX Hausys Interior Film catalogue features hundreds of additional patterns with a lead time of 2 weeks.

Quickly transform walls, doors, ceilings, furniture, skirting and architrave with minimum disruption, less environmental impact and at a lower cost.

All products feature a high tack permanent 'air-free' adhesive to aid application.

Currently the LX BENIF range of films are EN13501 fire rated and certified to CE, IMO and MED standards.  
UKCA certification is currently in the process of qualification.

# Key Information

**Fire Safety:** For the safe use of materials in commercial environments, it is required for manufactured products to be fit for purpose for fire rating and the EN13501 is broken down into three ratings:  
The first is the Euroclass rating represented by a letter, **A-F**, the second refers to the emissions due to combustion identified by **S1-S3** lowest to highest omissions, followed by **D** for droplets ranging from **d0-d2**, no dripping to high dripping.

**Combustibility:** **B** is the lowest rating for combustible materials

**Smoke:** **S1** quantity / speed and omissions are weak

**Droplets:** **d0** no dripping

The **UKCA** has been a result of Britain leaving the European Economic Area, AKA Brexit.

The **CE marking** represented the Conformité Européene, of the EU directives.

Now with Britain removing itself from this committee, the UK now has been changed to the UK manufacturers product certification, known as the **UKCA**.

Any products sold into the UK which previously carried the **CE** mark will now require the new **UKCA** mark.

This gives reassurance that the relevant health, application standards and environmental legislation have been met by the manufacturer at that it safe and legal for use.

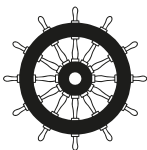

The older **CE** mark can be accepted in Great Britain until the end of 2022, the new **UKCA** (United Kingdom Conformity Assessed) is required for all products previously marked with **CE** mark by January 2023.

The **IMO (International Maritime Organisation)** has a slogan: safe, secure and efficient shipping on clean oceans.

It is part of the United Nations as a specialised agency responsible for the safety and security of shipping in international waters.

While most EC (European Commission) directives require products to carrying the **CE mark**, products certified under the **MED (Marine Equipment Directive)** carry the “**wheel mark**” and require the following two elements.

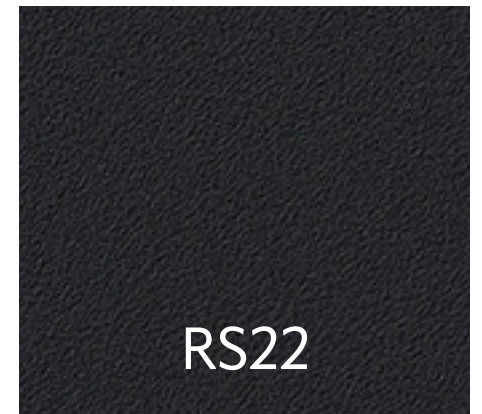

▲ **Module D** is the Production Quality Assurance (PQA) conformity assessment procedure for high volume production.  
The purpose of this assessment procedure is to ensure that the final product is the same as the reference product.  
This reference is a certified product that meets the standards and essential requirements.

▲ **Module B** is an EC certification of fire testing of a product and for most products, a Module B Certificate is mandatory and it must be used in combination with one of the Modules for Quality System Assessment i.e. Module D, E or F.
